An ounce of prevention is worth thousands of dollars in computer hardware & software replacements.

Many companies spend a fair amount of money protecting their computer equipment from theft. Not many consider that there are threats that cause millions of dollars of damage across the country each and every year.

Dust, viruses and unpatched software are the primary culprits.

Dust clogs fans and vents, preventing heat from escaping. Over time, repeated exposure to heat degrades performance of the various components of your computer. Inevitably, this leads to failure and irreparable damage.

Neglected software updates leave systems vulnerable to attack. Private and proprietary information needs to be protected.

What is the cost of downtime to your business?

BCM
COMPUTER TECHNOLOGIES

Your car has regularly scheduled maintenance. Your computer equipment should too.

Regular maintenance keeps your systems running at peak performance. A thorough physical and virtual cleaning at regular intervals will prolong the life of your equipment.

BCM's Maintenance Services will give you the peace of mind of knowing that your data and hardware are safe from common problems such as dust, viruses, or out of date software patches.

Who says you can't buy peace of mind?

Catching a problem before it manifests itself can save hours, even days or weeks of downtime. BCM's Maintenance Service includes tests for the most common problems that can affect your computers.

Peace of mind is within reach. Schedule your BCM Maintenance Service today to ensure your computer lives a long, happy life.

56% of data loss is due to hardware failure.*

Computer equipment never fails at a "convenient" time. Imagine losing your server due to overheating during your year-end process. How easy would it be to get back on your feet?

Preventative maintenance can help these situations. Early warning signs of failure *can* be caught. BCM Maintenance Servicing can detect these early warning signs and help you plan a proactive course of action rather than a reactive mad scramble.

For added protection, consider the BCM Offsite Backup System. Your data is backed up offsite from your offices, ensuring that your data is safe in the event of fire, flood, theft, or other potential disasters. Contact BCM Computer Technologies today to learn more about the BCM Offsite Backup System.
